

Instructions For Washing Tray

The RH Washing Tray should be set up on the RH Table Frame or a level bench top. Before use ensure that the drain valve is in the closed position. For easy drainage, screw in the drain hose to the outside hole of the drain valve, place the other end of the drain hose into a container or sink and raise the valve gate. Do not discharge solvents and chemicals into waste water drains.

Ensure that the RH Washing Tray is dry before packing away.

When cleaning the RH Washing Tray no abrasive cleaners or strong alkalis should be used.

Please Note: RH equipment is intended for use only by professional conservators. Use by inexperienced operators may result in damage to objects being treated.
